REPORT NO. 187

INVESTIGATION INTO THE ALLEGED DUMPING OF STAINLESS STEEL TUBES AND PIPES ORIGINATING IN OR IMPORTED FROM CHINESE TAIPEI: FINAL DETERMINATION
THE INTERNATIONAL TRADE ADMINISTRATION
COMMISSION OF SOUTH AFRICA HEREWITH PRESENTS
ITS REPORT No. 187: INVESTIGATION INTO THE
ALLEGED DUMPING OF STAINLESS STEEL TUBES AND
PIPES ORIGINATING IN OR IMPORTED FROM CHINESE
TAIPEI: FINAL DETERMINATION

Mr Itumeleng Masege
ACTING CHIEF COMMISSIONER

PRETORIA
16 August 2006
1. APPLICATION AND PROCEDURE

1.1 This investigation was conducted in accordance with the International Trade Administration Act, 2002 (Act 71 of 2002) (The "ITA Act"), the World Trade Organisation Agreement on Implementation of Article VI of the General Agreement on Tariffs and Trade, 1994 (the Anti-Dumping Agreement) and the International Trade Administration Commission Anti-Dumping Regulations (ADR).

1.2 The application was lodged by Barloworld Stainless, a manufacturer of stainless steel tubes and pipes in the SACU.

Other SACU producers through SASSDA indicated their support for the application.

1.3 The application was accepted by the Commission as being properly documented in accordance with Article 5.2 of the Anti-Dumping Agreement on 01 June 2005. The trade representative of the country concerned was advised accordingly.

1.4 The Commission formally initiated an investigation into the alleged dumping of stainless steel tubes and pipes originating in or imported from Chinese Taipei pursuant to Notice No.890 which was published in Government Gazette No. 27641 on 10 June 2005.

1.5 The investigation period for dumping was from 01 October 2003 to 30 September 2004. The injury investigation involved evaluation of data for the period 01 October 2002 to 30 September 2004.

1.6 The SACU producer of the subject product, namely Barloworld Stainless, submitted the information contained in this report.
Other SACU producers through SASSDA indicated their support for the application.

1.6 Responses to the Commission’s exporter questionnaire were received from the following manufacturers of the subject product in Chinese Taipei:

- Ta Chen
- Yeun Chyang Industrial
- Jaung Yuann Enterprises (now known as Froch Enterprises).

1.7 The investigation was also initiated against the PRC, India and Malaysia but no responses were received from the subject countries. The investigation was therefore split between the responding country and the non-responding countries.

This report will therefore exclude information in respect of PRC, India and Malaysia.

1.8 The following SACU importers responded to the Commission’s questionnaires:

(a) Natal Stainless Steel
(b) Stalcor
(c) Jacksons Metals
(d) Petro Pulp Stainless Steel cc
(e) Kendo International
(f) Steelway SA
(g) Cat Alloys cc
(h) International Metal Factoring cc
(i) Macsteel
(j) Energy Metals
(k) Eurosteel Natal
(l) NDE
1.9 After considering all parties' comments, the Commission on 22 February 2006, made a preliminary determination that stainless steel tubes and pipes originating in or imported from Chinese Taipei were not being dumped on the SACU market. The Commission, therefore, decided to recommend to the Minister of Trade and Industry that the investigation be terminated.

1.10 Based on the details as contained in the Commission's preliminary report and the comments received on this report, the Commission made a final decision that it was considering to confirm its preliminary determination that the subject product was not being dumped on the SACU market.

1.11 The Commission therefore indicated that it was considering making a final determination to recommend to the Minister of Trade and Industry that the investigation be terminated.

1.12 The Commission sent out letters to all interested parties, informing them in terms of Section 37 of the International Trade Administration Anti-Dumping Regulations and Article 6.9 of the Anti-Dumping Agreement on Implementation of Article VI of the General Agreement on Tariffs and Trade of the "essential facts" which were being considered by the Commission. The Commission invited comments from interested parties on these "essential facts" being considered by the Commission.

1.13 On 26 July 2006, after taking into consideration the comments from interested parties, the Commission made a final determination that the subject product from Chinese Taipei was not being dumped on the SACU market.
2. PRODUCTS, TARIFF CLASSIFICATION AND DUTIES

2.1 IMPORTED PRODUCTS

2.1.1 Description

The subject product is described as welded stainless steel tubes of circular cross-section with an outside diameter of 12mm and more, but not exceeding 160mm with a wall thickness of 1mm or more but not exceeding 6mm classified under tariff subheading 7306.40".

2.1.2 Country of origin/export

The subject products are exported from Chinese Taipei.

2.1.3 Application/end use

The welded stainless steel tubes are used for conveyance, structural or ornamental applications.

The product has a wide variety of applications for structural, architectural and decorative uses through to food and beverage processing and as general service in all types of mining, industrial, medical and petrochemical equipment manufacturing.

2.1.4 Tariff classification

The subject product is classifiable as follows:
2.1.5 Other applicable duties and rebates

The subject product is subject to the following revised anti-dumping duties which were re-imposed on 18 June 2004:

<table>
<thead>
<tr>
<th>Tariff subheading</th>
<th>Description</th>
<th>Duty</th>
</tr>
</thead>
<tbody>
<tr>
<td>73.06</td>
<td>Other Tubes, Pipes and Hollow Profiles (for example, Open Seam or Welded, Riveted or Similarly Closed) of Iron or Steel:</td>
<td></td>
</tr>
<tr>
<td>7306.40</td>
<td>- Other, welded, of circular cross-section, of stainless steel</td>
<td>10% 3.3% Free</td>
</tr>
</tbody>
</table>

2.1.6 Negligibility test

The following table shows the alleged dumped imports as a percentage of the total imports:

<table>
<thead>
<tr>
<th>kg</th>
<th>Import volumes 2002</th>
<th>2002 % of total</th>
<th>Import volumes 2003</th>
<th>2003 % of total</th>
<th>Import volumes 2004 (Jan – Sept)</th>
<th>2003 % of total</th>
</tr>
</thead>
<tbody>
<tr>
<td>Alleged dumped imports</td>
<td>402,911</td>
<td>26%</td>
<td>575,028</td>
<td>31%</td>
<td>1,132,740</td>
<td>46%</td>
</tr>
<tr>
<td>Other imports</td>
<td>1,131,551</td>
<td>74%</td>
<td>1,292,630</td>
<td>69%</td>
<td>1,344,141</td>
<td>54%</td>
</tr>
<tr>
<td>Total imports</td>
<td>1,534,462</td>
<td>100%</td>
<td>1,867,658</td>
<td>100%</td>
<td>2,476,881</td>
<td>100%</td>
</tr>
</tbody>
</table>
The information in the table above indicates that the dumped imports from Chinese Taipei accounted for 46 per cent of the total imports of the like product for the period 2004 (Jan – Sept).

2.2 SACU PRODUCT

2.2.1 Description

The subject product is described as "welded stainless steel tubes of circular cross-section with an outside diameter of 12mm to 160mm and a wall thickness of 1mm or more but not exceeding 6mm classified under tariff subheading 7306.40."

2.2.2 LIKE PRODUCTS ANALYSIS

In determining the likeness of products, the Commission uses the following criteria:

Table 2.2.2: Like product determination

<table>
<thead>
<tr>
<th></th>
<th>Imported product</th>
<th>SACU product</th>
</tr>
</thead>
<tbody>
<tr>
<td>Raw materials</td>
<td>The raw materials are stainless steel coils.</td>
<td>The raw materials are stainless steel coils.</td>
</tr>
<tr>
<td>Physical appearance</td>
<td>Welded stainless steel tubes of circular cross-section with an outside diameter of 12mm and more, but not exceeding 160mm with a wall thickness of 1mm or more but not exceeding 6mm.</td>
<td>Welded stainless steel tubes of circular cross-section with an outside diameter of 12mm and more, but not exceeding 160mm with a wall thickness of 1mm or more but not exceeding 6mm.</td>
</tr>
<tr>
<td>Tariff classification</td>
<td>The imported products are classifiable under tariff subheading 7306.40.</td>
<td>Locally produced products are classifiable under tariff subheading 7306.40.</td>
</tr>
<tr>
<td>Production process</td>
<td>The tube is manufactured from annealed stainless steel and welded with no addition of filler metal. The tube is then cut to length. Pressure, helium leak and eddy current tests are done on the tube if required.</td>
<td>The tube is manufactured from annealed stainless steel and welded with no addition of filler metal. The tube is then cut to length. Pressure, helium leak and eddy current tests are done on the tube if required.</td>
</tr>
</tbody>
</table>
The welded stainless steel tubes are used for conveyance, structural or ornamental applications. The product has a wide variety of applications for structural, architectural and decorative uses through to food and beverage and automotive exhaust duty as well as general service in all types of mining, industrial, medical and petrochemical equipment.

After considering all the above factors and the comments received, the Commission was satisfied that the SACU product and the imported products were "like products" for purposes of comparison in this investigation, in terms of Article 2.6 of the Anti-Dumping Agreement.
3 INDUSTRY STANDING

The information was obtained from Barloworld Stainless, a manufacturer of stainless steel tubes and pipes in the SACU. Other SACU producers through SASSDA, provided support for the application.

The Commission decided that the Application could be regarded as being made "by or on behalf of the domestic industry" under the above provisions of the Anti-Dumping Agreement.
4. DUMPING

4.1 METHODOLOGY IN THIS INVESTIGATION FOR CHINESE TAIPEI

4.1.1 Normal Value

Type of economy

Chinese Taipei is considered to be a country with free market economy. Therefore, definition of section 32 (2)(b) of the ITA Act was applied as a basis.

Ta Chen Stainless Steel Pipe Co. Ltd

Calculation of normal value

Like products to those exported to the SACU were sold in the domestic market in Chinese Taipei in the ordinary course of trade. The normal value was therefore determined using section 32(2)(b)(i) of the ITA Act as a basis.

Invoiced sales values to distributors were used as the basis for determining the normal value.

Adjustments to the normal value

The following adjustments to the normal value, which were verified, were claimed by the exporter and allowed by the Commission as it was shown that there was a difference in costs, which was demonstrated to have affected price comparability at the time of setting the prices:
(i) Domestic delivery costs

The exporter indicated that included in the selling prices in its domestic market was the cost for delivery. These costs were verified.

(ii) Packaging costs

The exporter indicated that domestic packaging was the same as the packaging used for exports.

The adjustment for packaging was calculated by dividing the cost by the weight. This was verified by the investigators.

(iii) Inventory carrying cost

The exporter indicated that it provided specific services to buyers in the domestic market and that the subject products are stored in a warehouse specifically for the domestic market.

The adjustment only applied to domestic sales. For exports, the subject products are moved directly from the factory to the containers for shipping.

4.1.2 Export Price

Calculation of export price

Like products to those sold in the domestic market in Chinese Taipei were exported to the SACU area during the period of investigation. The export price was therefore determined using section 32(2)(a) of the ITA Act (Act 71 of 2002) as a basis.

Export sales invoices from the exporter to distributors in the SACU were used to determine the export value.
Adjustments to the export price

The Commission made the following adjustments to the export price, as verified by the investigators, for purposes of calculating the ex-factory export price:

(i) Inland freight
(ii) Ocean freight and handling costs
(iii) Packaging
(iv) Export insurance

4.1.3 Margin of dumping

A dumping margin, expressed as a percentage of the fob export price, was calculated to be negative.

4.2 Yeun Chyang Industrial Co. Ltd

4.2.1 Normal Value

Calculation of normal value

Like products to those exported to the SACU were sold in the domestic market in Chinese Taipei in the ordinary course of trade. The normal value was therefore determined using section 32(2)(b)(i) of the ITA Act as a basis.

Invoiced sales values to distributors were used as the basis for determining the normal value.

Adjustments to the normal value

The following adjustments to the normal value, which were verified, were claimed by the exporter and allowed by the Commission as it was shown
that there was a difference in costs, which was demonstrated to have affected price comparability at the time of setting the prices:

(i) Cost of payment terms

The exporter claimed for domestic cost of payment terms.

(ii) Domestic delivery costs

The exporter claimed for domestic delivery costs. These costs were verified.

(iii) Packaging costs

The exporter claimed for packaging costs. It was indicated that the costs for domestic packaging differed to the costs for export packaging.

The adjustment for packaging was calculated by dividing the cost by the weight. This was verified by the investigators.

4.2.2 Export Price

Calculation of export price

Like products to those sold in the domestic market in Chinese Taipei were exported to the SACU area during the period of investigation. The export price was therefore determined using section 32(2)(a) of the ITA Act (Act 71 of 2002) as a basis.

Export sales invoices from the exporter to distributors in the SACU were used to determine the export value.
Adjustments to the export price

The Commission made the following adjustments to the export price, as verified by the investigators, for the purposes of calculating the ex-factory export price:

(i) Delivery charges

The exporter indicated that included in the selling prices in its domestic market was the cost for delivery. Therefore, the adjustment for inland and ocean freight was calculated by dividing the cost by the weight. These costs were verified.

(ii) Packaging

The adjustment for packaging was calculated by dividing the cost by the weight.

(iii) Exporting expenses

The adjustment for exporting expenses, which includes brokerage and export related bank charges, was calculated by dividing the cost by the weight.

4.2.3 Margin of dumping

A dumping margin, expressed as a percentage of the fob export price, was calculated to be negative.
4.3 Froch Enterprise Co. Ltd

4.3.1 Normal Value

Calculation of Normal Value

Like products to those exported to the SACU were sold in the domestic market in Chinese Taipei in the ordinary course of trade. The normal value was therefore determined using section 32(2)(b)(i) of the ITA Act as a basis.

Invoiced sales values to distributors were used as the basis for determining the normal value.

Adjustments to the normal value

The following adjustment to the normal value, which was verified, was claimed by the exporter and allowed by the Commission:

(i) Cost of payment terms

The exporter claimed an adjustment for domestic cost of payment terms.

4.3.2 Export Price

Calculation of the export price

Like products to those sold in the domestic market in Chinese Taipei were exported to the SACU area during the period of investigation. The export price was therefore determined using section 32(2)(a) of the ITA Act (Act 71 of 2002) as a basis.

Export sales invoices from the exporter to distributors in the SACU were used to determine the export value.
Adjustments to the export price

The Commission made the following adjustments to the export price, as verified by the investigators, for the purposes of calculating the ex-factory export price:

(i) Cost of payment terms

(ii) Ocean freight

(iii) Insurance

4.3.3 Margin of dumping

A dumping margin, expressed as a percentage of the fob export price, was calculated to be negative.

4.4 Residual dumping margin

Since there may be other manufacturers of the subject product in Chinese Taipei who are not known and/or who did not co-operate during the investigation period, the residual dumping margin was calculated by comparing the highest normal value of the cooperating exporters before adjustments to the export price based on the import statistics.

Based on the information the residual dumping margin as a percentage of the fob export price was calculated to be 0.1 per cent. The Commission regarded this margin to be de minimis.

4.5 CONCLUSION - DUMPING

For purposes of its final determination, the Commission considered all the comments from interested parties and found that the subject
products originating in or imported from Chinese Taipei were not being dumped into the SACU market.
5. MATERIAL INJURY

5.1 DOMESTIC INDUSTRY – MAJOR PROPORTION OF PRODUCTION

The following injury analysis relates to Barloworld Stainless, the Applicant, which constitutes 42 per cent of the total domestic production of the subject product.

The Commission decided that this constitutes "a major proportion" of the total domestic production, in accordance with Article 4.1 of the Anti-Dumping Agreement.

5.2 CUMULATIVE ASSESSMENT

The Commission found that the subject products compete directly with the other imported products and with the SACU manufactured product.

Based on this information, the Commission decided to cumulatively assess the effect of the subject products.

5.3 IMPORT VOLUMES AND EFFECT ON PRICES

Basic Data Set

5.5 CONCLUSION - MATERIAL INJURY

After considering all relevant factors and taking all comments into account, the Commission made a final determination that the Applicant was suffering material injury in that:

- the dumped imports had increased significantly;
- there was price undercutting;
- it experienced price suppression;
- its output declined;
- its sales declined;
- its profits decreased;
- its market share declined;
- its utilisation of production capacity declined;
- its productivity declined;
- there was a negative effect on its cash flow;
- its return on investment declined;
- its employment declined; and
- there was a negative effect on its growth.
6. CAUSAL LINK

6.1 GENERAL

As negative dumping margins were found for the co-operating exporters in Chinese Taipei and the residual dumping margin is considered to be de minimis, the Commission did not consider causality.
7.1 Dumping

The Commission found that the subject products originating in or imported from Chinese Taipei were not being dumped into the SACU market and were being dumped at a margin considered to be de minimis.

7.2 Material injury

The Commission found that the Applicant suffered material injury in the form of price undercutting, price suppression, the decline in output, decline in sales, decline in profit, decline in market share, decline in productivity, decline in capacity utilization, negative effect on cash flow, negative effect on employment and increase in inventory levels.

7.3 Causal link

As the Commission found that the subject products originating in or imported from Chinese Taipei were not being dumped into the SACU market or were being dumped at a margin considered to be de minimis, causality was not considered.
The Commission made a final determination that:

- the subject product originating in or imported from Chinese Taipei was not being dumped into the SACU market or were being dumped at a margin considered to be *de minimis*;

- the SACU industry suffered material injury; but

- factors other than dumping are causing the material injury to the SACU industry.

The Commission therefore decided to recommend to the Minister of Trade and Industry that the investigation on stainless steel tubes and pipes originating from Chinese Taipei be terminated.
